

# Contents

<b>Preface</b>	<b>vii</b>
<b>Structure of the book</b>	<b>ix</b>
<b>1 Numbers</b>	<b>1</b>
1.1 Natural and relative integers . . . . .	2
1.1.1 Natural integers . . . . .	2
1.1.2 Relative integers . . . . .	2
1.2 Rational numbers . . . . .	3
1.3 Real numbers . . . . .	5
1.4 Sum of terms in a progression . . . . .	11
1.4.1 The summation symbol . . . . .	11
1.4.2 Sum of terms in an arithmetic progression . . . . .	13
1.4.3 Sum of terms in a geometric progression . . . . .	14
1.5 An outline of set theory . . . . .	16
1.5.1 Sets . . . . .	16
1.5.2 Relations and operations with sets . . . . .	17
1.5.3 Cartesian product . . . . .	20
1.6 Sets of real numbers . . . . .	20
1.6.1 Maximum and minimum of a set . . . . .	21
1.7 The cartesian plane . . . . .	22
1.8 How many elements in a set? . . . . .	26
1.8.1 Finite set. Combinatorics . . . . .	26

1.8.2	Infinite sets. Countability, power of the continuum . . . . .	31
1.9	Exercises . . . . .	32
<b>2</b>	<b>Functions</b>	<b>37</b>
2.1	The concept of function . . . . .	38
2.2	Sequences . . . . .	42
2.2.1	Recursive sequences . . . . .	43
2.2.2	Geometric sequences . . . . .	44
2.3	Linear functions . . . . .	45
2.4	Quadratic and inverse proportionality . . . . .	48
2.4.1	Quadratic functions . . . . .	48
2.4.2	Inverse proportionality . . . . .	50
2.5	Composite function. Inverse function . . . . .	51
2.5.1	Composite function . . . . .	51
2.5.2	Inverse function . . . . .	53
2.6	Monotonic, bounded, convex functions . . . . .	54
2.6.1	Bounded functions . . . . .	54
2.6.2	Monotonic functions and sequences . . . . .	55
2.6.3	Maximum and minimum values . . . . .	56
2.6.4	Convex and concave functions . . . . .	57
2.6.5	Local properties . . . . .	58
2.7	Power functions . . . . .	60
2.8	Exponential, logarithmic, trigonometric functions . . . . .	62
2.8.1	Exponential function . . . . .	62
2.8.2	Logarithmic functions . . . . .	63
2.8.3	Trigonometric functions . . . . .	64
2.9	Geometric transformations . . . . .	67
2.10	Exercises . . . . .	71
<b>3</b>	<b>Limits</b>	<b>75</b>
3.1	Limits of sequences . . . . .	76
3.1.1	Asymptotic properties of a sequence . . . . .	76
3.1.2	Convergent sequences . . . . .	76
3.1.3	Divergent sequences . . . . .	78
3.1.4	Irregular sequences . . . . .	80
3.1.5	Uniqueness of the limit . . . . .	80
3.1.6	Limits of elementary sequences . . . . .	81
3.2	Limits of functions . . . . .	81
3.2.1	Right-hand limit . . . . .	82
3.2.2	Left-hand limit. Limit . . . . .	82
3.2.3	Limit as $x \rightarrow +\infty, -\infty$ . . . . .	83
3.3	Existence of the limit . . . . .	85
3.3.1	Limit of a monotonic sequence . . . . .	85
3.3.2	Limit of a monotonic function . . . . .	85
3.3.3	Limits of elementary functions . . . . .	86

3.4	The number $e$ . . . . .	88
3.5	Calculation of limits . . . . .	91
3.5.1	The set $\mathbb{R}^*$ . . . . .	91
3.5.2	Limits and algebraic operations . . . . .	92
3.5.3	Limits and inequalities . . . . .	93
3.5.4	Change of variable . . . . .	96
3.6	Comparisons . . . . .	97
3.6.1	The symbols “ $o$ ” and “ $\sim$ ” . . . . .	97
3.6.2	The hierarchy of infinities . . . . .	100
3.6.3	The hierarchy of infinitesimals . . . . .	102
3.7	Exercises . . . . .	103
<b>4</b>	<b>Continuity</b> . . . . .	<b>105</b>
4.1	An intuitive idea of continuity . . . . .	105
4.2	Continuous functions . . . . .	107
4.2.1	Continuity of elementary functions . . . . .	107
4.2.2	Discontinuities . . . . .	109
4.3	Properties of continuous functions . . . . .	111
4.4	Exercises . . . . .	118
<b>5</b>	<b>Differential Calculus and Optimization</b> . . . . .	<b>119</b>
5.1	Derivative and tangent line . . . . .	120
5.1.1	Derivatives and continuity. Right and left derivatives . . . . .	123
5.1.2	Interpretations of the derivative . . . . .	124
5.2	Elementary formulae . . . . .	125
5.3	Algebra of derivatives . . . . .	128
5.4	Composite functions and inverse functions . . . . .	131
5.4.1	The derivative of a composite function . . . . .	131
5.4.2	The derivative of the inverse function . . . . .	134
5.5	The differential . . . . .	135
5.6	Elasticity and semi-elasticity . . . . .	140
5.6.1	Elasticity . . . . .	140
5.6.2	Logarithmic derivative or semi-elasticity . . . . .	143
5.7	Optimization and stationary points . . . . .	146
5.8	Lagrange’s mean value theorem . . . . .	151
5.9	Monotonicity test . . . . .	152
5.10	De l’Hospital’s theorem . . . . .	155
5.11	Taylor’s formula . . . . .	158
5.12	Test for convexity (or concavity) . . . . .	164
5.13	Taylor’s formula of order $n$ . . . . .	168
5.14	Exercises . . . . .	175
<b>6</b>	<b>Series</b> . . . . .	<b>181</b>
6.1	The concept of series . . . . .	181
6.2	Geometric series . . . . .	185
6.3	The problem of convergence . . . . .	187

6.3.1	A necessary condition for convergence . . . . .	188
6.4	Series with non-negative terms . . . . .	189
6.5	Series with terms of non-constant sign . . . . .	193
6.5.1	Series with terms of alternate sign . . . . .	194
6.6	Exercises . . . . .	195
<b>7</b>	<b>Integral Calculus</b>	<b>197</b>
7.1	Introduction . . . . .	198
7.2	The Riemann integral . . . . .	199
7.3	Properties of the integral . . . . .	202
7.3.1	Additivity, linearity, monotonicity . . . . .	202
7.3.2	Mean value theorem . . . . .	203
7.4	The Fundamental Theorem of Calculus . . . . .	204
7.5	The indefinite integral . . . . .	208
7.5.1	Linearity and the decomposition method . . . . .	211
7.5.2	Integration by parts . . . . .	212
7.5.3	Integration by substitution . . . . .	213
7.6	Improper integrals . . . . .	217
7.6.1	Preliminary considerations . . . . .	217
7.6.2	Integrals over unbounded intervals . . . . .	219
7.6.3	Bounded intervals and unbounded functions . . . . .	223
7.6.4	Unbounded intervals and unbounded functions . . . . .	225
7.6.5	Properties of improper integrals . . . . .	226
7.7	Integrability criteria . . . . .	226
7.8	Series and integrals . . . . .	229
7.9	Integral functions . . . . .	231
7.10	Exercises . . . . .	235
<b>8</b>	<b>Vectors and Matrices</b>	<b>239</b>
8.1	Vectors in $\mathbb{R}^n$ . . . . .	239
8.2	Operations with vectors . . . . .	242
8.2.1	Linear combinations . . . . .	245
8.3	Inner product of two vectors . . . . .	247
8.3.1	Modulus, distance . . . . .	248
8.4	Subspaces of $\mathbb{R}^n$ . . . . .	250
8.5	Linear dependence . . . . .	254
8.6	Bases and dimension of a subspace of $\mathbb{R}^n$ . . . . .	258
8.7	Matrices . . . . .	260
8.8	Operations with matrices . . . . .	262
8.8.1	Sum of matrices and product of a matrix by a scalar . . . . .	262
8.8.2	Product of matrices . . . . .	263
8.8.3	Inverse matrix . . . . .	269
8.9	The determinant . . . . .	270
8.9.1	Properties of the determinant . . . . .	274
8.10	Inverse matrix . . . . .	276

8.11 Rank of a matrix . . . . .	278
8.12 Exercises . . . . .	280
<b>9 Linear Systems and Functions</b>	<b>283</b>
9.1 Linear systems . . . . .	283
9.1.1 Elimination method . . . . .	285
9.1.2 Linear systems and matrices . . . . .	286
9.2 Systems with $n$ equations and $n$ unknowns . . . . .	287
9.3 General systems . . . . .	288
9.3.1 Solution scheme . . . . .	290
9.4 Structure of the solutions . . . . .	291
9.4.1 Homogeneous systems . . . . .	291
9.4.2 Structure of the solutions of a linear system . . . . .	292
9.5 Economic applications . . . . .	293
9.6 Linear functions from $\mathbb{R}^n$ to $\mathbb{R}^m$ . . . . .	300
9.6.1 Image and kernel of a linear function . . . . .	305
9.7 Exercises . . . . .	307
<b>10 Multivariable Differential Calculus</b>	<b>311</b>
10.1 Introduction . . . . .	312
10.1.1 Graph of two-variable functions . . . . .	313
10.1.2 Level curves . . . . .	314
10.2 Domain of a function . . . . .	315
10.3 Global and local extrema . . . . .	317
10.3.1 Concave and convex functions . . . . .	319
10.4 Quadratic forms . . . . .	320
10.5 Continuity . . . . .	325
10.6 Partial derivatives . . . . .	326
10.7 Differentiability and tangent plane . . . . .	327
10.7.1 The chain rule . . . . .	332
10.8 Implicit functions . . . . .	333
10.9 Second order Taylor's formula . . . . .	337
10.9.1 Second derivatives and Hessian matrix . . . . .	337
10.9.2 Second differential and second order Taylor's formula . . . . .	339
10.10 Functions of $n$ variables . . . . .	340
10.11 Optimization. Unconstrained extrema . . . . .	342
10.11.1 Unconstrained and constrained extrema . . . . .	342
10.11.2 First and second order conditions . . . . .	343
10.12 Constrained extrema . . . . .	349
10.12.1 Explicit constraint . . . . .	349
10.12.2 Lagrange's multipliers . . . . .	351
10.12.3 Economic interpretation. Saddle points . . . . .	356
10.12.4 Saddle points and multipliers for $n$ -variable functions . . . . .	359
10.13 Exercises . . . . .	360

<b>11 Financial Calculus</b>	<b>365</b>
11.1 Accumulation and discount . . . . .	365
11.2 Standard systems of financial laws . . . . .	368
11.2.1 Simple interest and simple discount . . . . .	369
11.2.2 Compound interests and compound discount . . . . .	371
11.2.3 Bank discount and anticipated simple interests . . . . .	373
11.2.4 Force of interest . . . . .	376
11.3 Typical applications of compound interests . . . . .	379
11.3.1 Simple annuities with constant instalments . . . . .	379
11.3.2 Discounted Cash Flow . . . . .	381
11.3.3 Amortization plans . . . . .	385
11.3.4 A theoretical issue: decomposability . . . . .	386
11.4 Exercises . . . . .	387
<b>Index</b>	<b>389</b>
