

Contents

1 GDP, Prices, Inflation, Interest	1
1.1 National Accounting	1
1.2 Prices, quantities, time and rates	12
1.2.1 Price indices and Inflation	13
1.2.2 Exchange and goods available at different times	14
1.2.3 Rates of interest	15
1.3 Two more elaborate examples	19
1.4 The case $Y = G$	22
1.5 Beyond GDP?	23
1.6 Exercises	24
2 Economic Growth: the Solow Model	31
2.1 Introduction	31
2.1.1 Growth rate in continuous time	32
2.1.2 Growth over millennia, and the world today	33
2.1.3 The logarithmic scale	34
2.2 The Solow growth model	34
2.2.1 Dynamics and stationary state	37
2.2.2 Catching up	38
2.2.3 The role of parameters s and n	39
2.2.4 Consumption in stationary state: The Golden Rule of capital accumulation	39
2.2.5 Economic policy	40
2.2.6 Income distribution and Cobb-Douglas function	42
2.2.7 Technological progress and growth in stationary state	43
2.2.8 Economic policy and data	44
2.2.9 Estimating technological progress: the Solow residual	45
2.2.10 Prices and markets	45
2.3 What would come next: endogenous growth	46
2.4 Exercises	47

3 From Solow to the <i>IS</i> curve	51
3.1 From the long run to the short run	51
3.2 The change of perspective	52
3.3 Savings and Investments: the <i>IS</i> curve	52
3.4 The paradox of saving	53
3.5 Effective Demand	54
3.6 Shifts of the <i>IS</i> curve	55
3.7 Exercises	56
4 The economy with flexible prices	57
4.1 Introduction	57
4.2 The model and equilibrium with flexible prices	58
4.2.1 Labour market and equilibrium production	58
4.2.2 The market of loanable funds	60
4.2.3 Money and the price level	61
4.2.4 General equilibrium	63
4.3 Economic analysis of the model	64
4.3.1 Effects of a contraction in the consumption function	64
4.3.2 Countercyclical policy: variation of G and M	66
4.3.3 Supply shock	67
4.4 Money supply and financial intermediation	68
4.5 Exercises	71
5 The point of view of JM Keynes	75
5.1 Alternative solution of the model	75
5.1.1 The loanable funds market: $I = S$	76
5.1.2 The liquidity market: $L = M$	77
5.1.3 <i>IS-LM</i> equilibrium	79
5.1.4 Back to general equilibrium	80
5.2 Introduction to Keynesian analysis	82
5.2.1 Adjustments and the role of economic policy	82
5.2.2 Supply in the short run	84
5.2.3 “Aggregate demand” as function of P	85
5.2.4 Next step	86
5.3 Exercises	87
6 <i>IS-LM</i> equilibrium with linear functions	89
6.1 Equilibrium computation	89
6.2 Dependence of equilibrium on G and M	90
6.3 Effectiveness of fiscal and monetary policy	91
6.3.1 The public expenditure multiplier	92

6.3.2	Investments sensitive to r	95
6.3.3	Liquidity demand sensitive to r : Liquidity Trap	95
6.4	Exercises	99
7	Equilibrium and adjustments	105
7.1	Introduction: vertical AS , horizontal AS	105
7.1.1	AD shifts with the IS and LM curves	105
7.1.2	AD contracts. What happens? Two different answers from two different models	106
7.2	$IS-LM$ equilibrium, recap of transitions	107
7.2.1	The IS curve shifts	108
7.2.2	The LM curve shifts	109
7.3	Convergence to general equilibrium	110
7.3.1	IS contraction	110
7.3.2	LM contraction	110
7.4	Government and the Central Bank	111
7.4.1	Cooperation	112
7.4.2	Conflict	113
7.4.3	Divergence of opinion	115
7.4.4	“I can’t do more”	118
7.5	Interest rate target: the $IS-MP$ model	118
7.6	Exercises	120
8	Labour market and price expectations: $AS-AD$ analysis	123
8.1	Introduction	123
8.2	Labour market	124
8.2.1	labour supply: wages and price expectations	124
8.2.2	The firm: price making and labour demand	125
8.2.3	Labour market equilibrium	126
8.2.4	Looking ahead: general equilibrium	126
8.3	The AS curve	127
8.4	Stable general equilibrium: $P^e = P^{eq}$	129
8.5	Temporary general equilibrium: $P^e \neq P^{eq}$	131
8.6	Transitions between equilibria	133
8.6.1	Rational expectations	134
8.6.2	Adaptive expectations	134
8.7	Comparison with fixed price adjustment	137
8.8	Interest rate targets of the Central Bank	138
8.9	AS shock and structural policies	140
8.10	Inflation, Phillips curve and Taylor rule	141
8.10.1	Inflation expectations, AS and the Phillips curve	142

8.10.2 <i>IS-LM</i> , central bank and the Taylor rule	143
8.10.3 Equilibrium	145
8.10.4 Zero lower bound and quantitative easing	145
8.11 Exercises	148
9 Public expenditure and intertemporal choice	153
9.1 Introduction	153
9.2 The model	154
9.2.1 The consumer	155
9.2.2 The firm	158
9.2.3 The government	160
9.3 Equilibrium in the current period	161
9.3.1 Labour market	161
9.3.2 Goods (or funds) market	162
9.3.3 <i>IS-LL</i> equilibrium	162
9.4 Equilibrium as G varies	163
9.4.1 Markets	163
9.4.2 How equilibrium changes if G goes up	165
9.4.3 What we learned from the intertemporal model	166
9.5 Intertemporal equilibrium: complete example	167
9.5.1 The firm	167
9.5.2 The consumer	168
9.5.3 Funds market and Walras' Law	170
9.5.4 Equilibrium	171
9.5.5 Solution of the system (Python file)	171
9.6 Exercises	173
